SoftFly WormFly (bombardarda fly fishing)

the **WormFly** programme imitating a worm the has the advantages of regular twisters with its vibrating, S-shaped tail action but is designed specifically for bombardarda fly fishing with ultra slow drop down and retrieval.

complete WormFly programme includes hook sizes #4, #6 and #10

what's new about WormFly?

- WormFly is the **only** grub mounted directly on a hook ready to use for bombardarda or spin fishing
- no other bombardarda fly looks like the WormFly

why does this work?

- fishing the WormFly size as a wet bombardarda fly clearly gives the angler more lifelike movements
- this fly looks more like a worm than any feather or hair based bombardarda fly around
- as a spin lure the WormFly can be retrieved much slower than grub jigs mounted on heavy jig heads
- since the WormFly imitates a worm – any worm eating species can be caught on the bombardarda fly
